Prompt Engineering – Student Worksheets

Purpose: These worksheets are designed to help you practice Prompt Engineering step by step. There are no right or wrong answers. Focus on clarity and improvement.

Worksheet 1: Understanding Prompts (Basics)

1. What is a Prompt? (Write in your own words)

A prompt is a clear instruction or question that we give to a computer or AI to tell it what we want.

If the prompt is clear, we get a better and correct answer. If it is confusing, the answer may also be confusing.

2. Real-Life Connection

Think of one daily-life situation where clear instructions are important (example: ordering food, asking for directions).

Situation:

When we ask someone for directions, we should give clear details.

If we only say “Where is the bus stop?”, the answer may be confusing.

But if we say “Where is the nearest bus stop from this place?”, we will get a clear answer.

What happens if instructions are unclear?

Clear prompts give correct answers, and unclear prompts give wrong or incomplete answers.

Worksheet 2: Bad Prompt vs Good Prompt

Prompt Example

Bad Prompt:

Explain AI.

Your Task

Rewrite the above prompt to make it better by adding details.

Improved Prompt:

Explain Artificial Intelligence in simple words for a student. Give one real-life example and keep the answer short.

Why is your improved prompt better?

This prompt is better because it clearly explains what level of explanation is needed and asks for an example, so the answer will be more clear and useful.

Worksheet 3: The 5 Building Blocks of a Good Prompt

Fill in the blanks for the topic "**Cloud Computing**".

1. Role (Who is AI?):

Role means telling the AI who it should act like.

Example: teacher, trainer, mentor, interviewer, etc.

2. Task (What should AI do?):

Task means what work we want the AI to do.

Example: explain, write, summarize, solve, suggest -> Explain Cloud Computing for a college presentation,

3. Context (For whom?):

Context means giving extra information so AI understands the situation better. -> I am an engineering student and I have a presentation tomorrow.

4. Format (How should the answer look like?):

Format tells how the answer should be written, like points, paragraph, table, etc. -> In 10 slides with bullet points.

5. Constraints (Limits):

Constraints are rules or limits, like word limit, simple language, no examples, etc.-> Explain the technical words in simple language.

Worksheet 4: Role-Based Prompting Practice

Topic: Resume Preparation

Write two prompts for the same topic using different roles.

Prompt 1 (Role: Teacher): You are a teacher. Explain the importance of resume preparation and guide students on how to create a well-structured resume using simple and clear language.

Prompt 2 (Role: Recruiter):

You are a recruiter. Provide practical tips on how candidates can prepare an effective resume that highlights their skills, experience, and suitability for a job.

What difference do you expect in the answers?

The teacher answer will be more formal and explanatory, but the recruiter answer will be more motivating and friendly.

Worksheet 5: Prompt Improvement Exercise

Original Prompt

Help me prepare for interviews.

Step 1: Add Role

You are an interview coach

Step 2: Add Context

I am attending a job interview for a Data Analyst role and my background is

B.Tech Step 3: Add Format or Constraints

Give me a list of questions and answers, mock interview and tips to crack the interview
Final Improved Prompt:

You are an interview coach. I am attending a job interview for Data Analyst role. My background is B.Tech. Give me the list of questions with answers, Mock interview and tips to crack the interview.

Worksheet 6: Practice Prompts (Hands-On)

Write prompts for the following tasks:

1. Learning a New Topic

You are a teacher. Explain photosynthesis in simple words for a beginner student using points.

2. Resume Help

You are a career expert. Help me improve my resume for a fresher job. Suggest simple changes. **3.**

3. Interview Practice

You are an interviewer. Ask me basic interview questions for a fresher and give feedback.

4. Explaining a Topic Simply

You are a teacher. Explain Artificial Intelligence in simple words with one example.

5. Solving a Daily Problem

You are a guide. Suggest simple ways to manage time better for daily study.

Worksheet 7: Identify the Mistake

Read the prompt and identify what is missing.

Prompt:

Write about programming.

What is missing? (Circle one)

- Role
- **Context**
- Format
- Constraints

How would you fix it?

You are a teacher. Write about programming in simple words for beginners in short points.

Worksheet 8: Reflection (Very Important)

Answer honestly:

1. What did you find easy about Prompt Engineering?

I found it easy to write clear instructions and add details to improve prompts.

2. What was confusing?

At first, understanding what role, context, and constraints mean was confusing.

3. How can better prompts help you in studies or career?

Better prompts help me get clear answers, save time, and learn things more easily.

Final Reminder

Prompt Engineering is not about technology.

It is about how clearly you can think and communicate.

— Bharat Unnati AI Fellowship (FAB)

What's included:

- Basics of prompts
- Bad vs good vs great prompt practice
- 5 building blocks worksheet
- Role-based prompting
- Prompt improvement steps

- Hands-on practice prompts
- Mistake identification
- Reflection & learning mindset
