

Name: PRATHVIRAJ GOWDA

USN: 1CR22CD034

E-mail: prgo22csds@cmrit.ac.in

CAREER PLANNING THROUGH ARTIFICIAL INTELLIGENCE Target Role: Backend Developer

STEP 1: PERSONAL & ACADEMIC SNAPSHOT (YOU)

Education

- Bachelor of Engineering – Computer Science
- Final Year (8th Semester)
- Graduation: 2026

Academic Strengths

- Programming & problem solving
- Data structures & algorithms
- Databases and system basics

Practical Exposure

- Frontend Development Internship
- Experience working with APIs & UI integration
- Team Lead for major academic project
- Exposure to real-world development workflows

Positioning insight:

You are a problem-solving engineer transitioning into scalable backend systems.

STEP 2: CURRENT SKILL MAP (REALISTIC)

Technical Skills

- Python (logic & scripting)
- DSA (strong backend advantage)
- SQL (schema design, queries)
- HTML, CSS, JavaScript
- Basic system & API understanding

Soft Skills

- Logical reasoning
- Debugging mindset
- Team communication
- Ownership & leadership
- Adaptability

Market Reality:

Backend roles value clean code, APIs, databases, and scalability.

STEP 3: INTEREST & WORK STYLE

ALIGNMENT What Energizes You

- Writing logic-heavy code
- Designing APIs
- Solving real backend problems

What Drains You

- Pure UI styling
- Design-only frontend work

Conclusion:

Backend Developer is a natural progression from your skill set.

STEP 4: CAREER OBJECTIVES (CLEAR &

ACHIEVABLE) Short Term (0–1 year)

- Role: Backend Developer Intern / Junior Backend Engineer
- Salary: ₹4–6 LPA

Mid Term (3–5 years)

- Role: Backend Engineer / Senior Backend Developer •
- Salary: ₹15–22 LPA

Long-Term Vision

- Expertise in scalable systems
- Work on core product architecture
- High-impact engineering roles

AI-GENERATED CAREER FIT ANALYSIS

Best-Fit Role: Backend Developer

Why this fits YOU

- Strong DSA & logic
- Comfort with databases
- API + integration exposure
- Interest in systems over UI

Entry-Level Roles to Target

- Backend Developer Intern
- Junior Backend Engineer
- Software Engineer (Backend)

SKILL GAPS TO BRIDGE (ONLY WHAT MATTERS)

Must-Have

- Backend framework (FastAPI / Django / Node.js) •
- REST APIs
- Authentication & authorization
- Database design (SQL + basics of NoSQL)

Good-to-Have

- Docker
- System design basics
- Cloud fundamentals

30-DAY FOCUSED ACTION PLAN

(JOB-ORIENTED) Week 1: Backend Basics

- Choose backend stack
- REST API fundamentals
- Database connections

Week 2: Core Development

- CRUD APIs
- Authentication
- Error handling

Week 3: Advanced Concepts

- API optimization
- Caching basics
- Security best practices

Week 4: Proof of Work

- Build a complete backend service
- GitHub + README
- Resume + job applications

PROJECT RECOMMENDATION (VERY IMPORTANT)

Capstone Project Idea

Scalable Backend for a Real Application

- User auth
- CRUD APIs
- Database design
- Clean architecture

Recruiters look for real backend projects, not toy apps.

FINAL GUIDANCE

- Backend rewards depth, not flash
- Master one stack properly
- Strong fundamentals = long-term growth

If you want next, I can:

- Compare AI Engineer vs Backend Developer for *you* •
Create a 60-day roadmap for either role
- Design resume + GitHub project structure • Tell
you which role pays faster vs scales better
